

Catalog - AntiVibration Mats - ADD-70

**Catalog. AntiVibration Mats.**

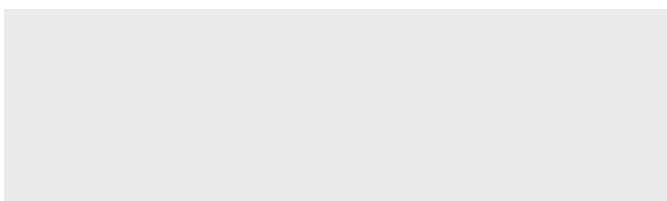

These types of anti-vibration mats are used in machinery which generate vibrations in the high frequency range. The special design ensures a firm grip on the ground for machines with continuous plane bases without holes which, therefore, cannot be fixed to the ground with conventional machine mounts.

Available in 4 different sizes, the antivibration mats are manufactured in rubber of 45, 50 and 70 shore, with an additional model in polyurethane of 90 shore. Easy to cut if necessary.
